

## **SPECIFICATIONS FOR APP**

<b>Device:</b>	Mobile
<b>OS:</b>	iPhone with possibility to adapt for an Android environment
<b>Internet Usage</b>	App downloadable, not requiring internet after download

---

### **OVERVIEW:**

The App is designed to be a mobile audio guide. Its key feature is selecting previously downloaded audio tours and opening audio tracks inside a built-in player.

### **KEY FEATURES:**

1. Library - here user can select collections of tours. Each collection contains approximately 5 individual tours. Each tour has its own audio track.
2. Audio Player - here user can play selected audio track, control it and switch between other tracks.
3. Audio Player after locking phone - using similar solution to Spotify/iTunes which allows user to control audio guide without unlocking phone.
4. Right after downloading the App, user has access to one free demo tour. Other collections of tours are available for purchase in App Store (possibility to download them right to the App).

### **OTHER FEATURES:**

1. Individual tours are displayed on a free-source or graphical map. After selecting a tour, the User is taken to general overview.
2. User can read directions to each selected tours. Each tour is "fixed", App therefore does not have to connect to Internet.
3. User can also find starting points of each tour on an open-source map.
4. User can send direct e-mail to the App owner with feedback.
5. User can download collections of tours by redeeming a gift card/code.

### **SIGN IN/LOG IN:**

Creating user process through email address and creation of password (Internet connection required).

### **APP MARKET:**

To be specified

### **GRAPHICS:**

Will be created by the customer.

### **LANGUAGE:**

English with possibility to adapt to other language options
